MEMORANDUM	FOR:	A11	RED	Personnel	

SUBJECT : PPBS Request for R&D Reports

1. PPBS has officially requested that RED provide them with copies of all final reports and interim reports resulting from our R&D contracts. We had discussed the situation with and asked for further definition; we now have that definition. Effective 29 March 1971, we will provide one copy of each final report and one copy of each interim report which relates to the completion of a task within a larger program. If significant quarterly or bi-yearly summary reports result from a contract, these are to be interpreted as interim reports.

- 2. The required reports are to be submitted under the following guidelines:
 - a. Each project officer is responsible for seeing that the reports resulting from his programs, projects, and/or tasks are forwarded on a timely basis to the Division secretary for subsequent transmittal to PPBS.
 - is to maintain a log of the items forwarded, along with the date of forwarding and the name of the individual from whom the report was obtained.
 - c. These copies are to be provided to PPBS for their retention or destruction; we do not want these documents returned. Project officers are responsible for making sure that adequate copies are available from the contractor to permit this system to function smoothly. In those rare cases where the copies are limited and the return of a document is required, a note to that effect should be attached at the time of forwarding.

Chief, Research & Engineering Division, TSG/NPIC

Original period of performance of this contract was 15 May 1968 to 24 July 1968. Prototype received 4 October, tested 8-16 October 1968, found unacceptable, and returned to contractor 23 December 1968. Tested at NPIC during March/April 1969, again found unacceptable,
and returned to contractor. Inspection trip on 18 July 1969 revealed that problem still was not corrected. During telephone conversation of 20 October 1969, contractor stated that instrument had been corrected as much as possible without major mechanical redesign. Instrument to be forwarded to NPIC for operational evaluation to determine if there is any further interest in the device.
and returned to contractor. Inspection trip on 18 July 1969 revealed that problem still was not corrected. During telephone conversation of 20 October 1969, contractor stated that instrument had been corrected as much as possible without major mechanical redesign. Instrument to be forwarded
